Git Workflow

Our repository is setup as a gitflow style workflow.

See here: https://www.atlassian.com/git/tutorials/comparing-workflows/gitflow-workflow

In order to setup a branch for working run the commands in this order:

```
git checkout dev

git branch <Insert-branch-name-here>
```
C detected

Then check to see if you are on the correct branch. It should show in the bottom left of your IDE. If you are not on the working branch run:

```
git checkout <Insert-branch-name-here>
```
C detected

Once you have edited a file and are ready to commit:

```
git add [file_name]

git push
```
C detected

Once all your commits are complete login to GitHub and create your pull request for your branch
